GERBER TECHNOLOGY

# Documentation Style Guide

For internal documentation (user guides, quick start guides, etc.) generated on Microsoft Word and imported into MadCap Flare.

## CONFIDENTIAL

DO NOT COPY OR RE-DISTRIBUTE WITHOUT PRIOR WRITTEN CONSENT FROM GERBER TECHNOLOGY, LLC.

Quinones, Charlene

V:4_5.8.20

## Overview

This template provides a basis of what each document should contain. Any additions are to be included within this document for uniformity.

## Font – Styles Formatting

It is best to use Word Styles formatting like *Heading 1, 2*, to organize content within a document. **This formatting is imperative when importing a Word document into MadCap Flare.**

To apply a style in Word, place your cursor in the text and select a style from Home > Styles, or right-click and select Styles > [word style]. If your source document includes "headings" that are actually normal body text styled to look like headings, consider converting them to real headings and you will reduce the chances of headaches and extra work later on.
(Manes, 2018)

The **global** font:

- Calibri (Serif font)

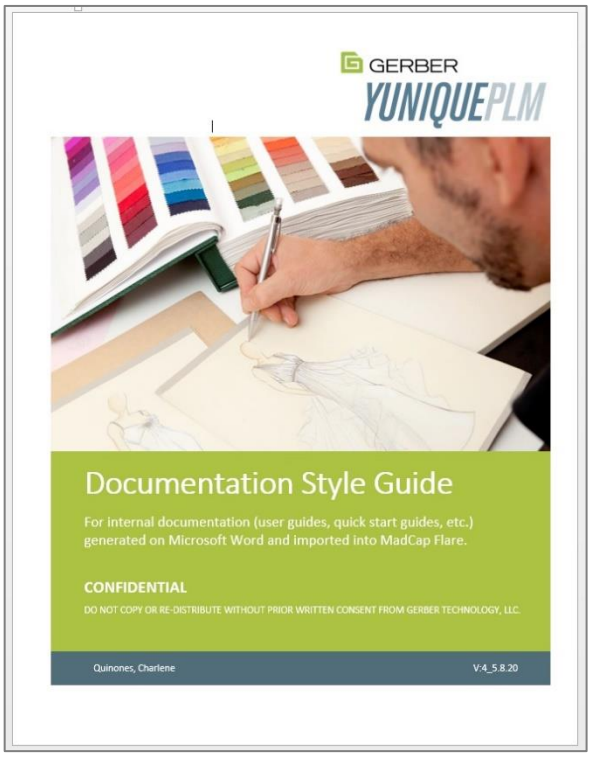
Preferred Styles:

- Title = 36pt.
- Heading 1= 16pt
- Heading 2 = 14pt - subheading
- Heading 3 = 12pt Color: Blue Accent 1 Darker 50%, Calibri Light
- Body (Normal) = 12pt.
- Captions = 9pt.

## Cover Page

The **cover page** consists of:

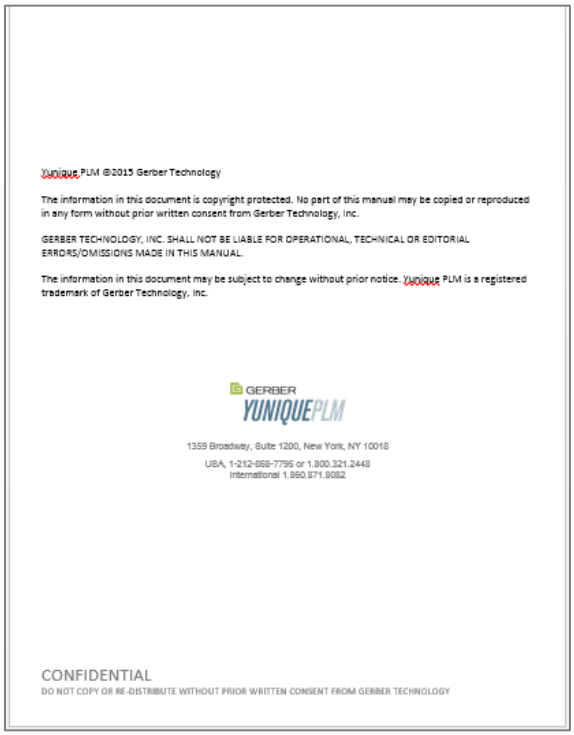
- The company logo
  - Logo top right (image cannot touch logo)
  - Gerber bottom middle
- Product/ brand image
- Document title
- Author name
- Document version #
- Confidentiality statement



## Inside Front Cover

The **inside front cover page** consists of:

- Title of document
- Year
- Copyright
- Company logo and address
- Document disclaimers
  - Copyright protection.
  - NOT BE LIABLE FOR OPERATIONAL, TECHNICAL OR EDITORIAL ERRORS/OMMISIONS MADE IN THIS MANUAL.
  - The information in this (document) may be subject to change without prior notice.
  - Confidentiality statement
- Registered trademarks



## Table of Contents

The **table of contents** page consists of:

- Section titles
- Subsections
- Page #'s (to the right of the subsection)
- Company logo (centered within footer)
- Add clickable links to each section

Item placement may vary according to design preference.

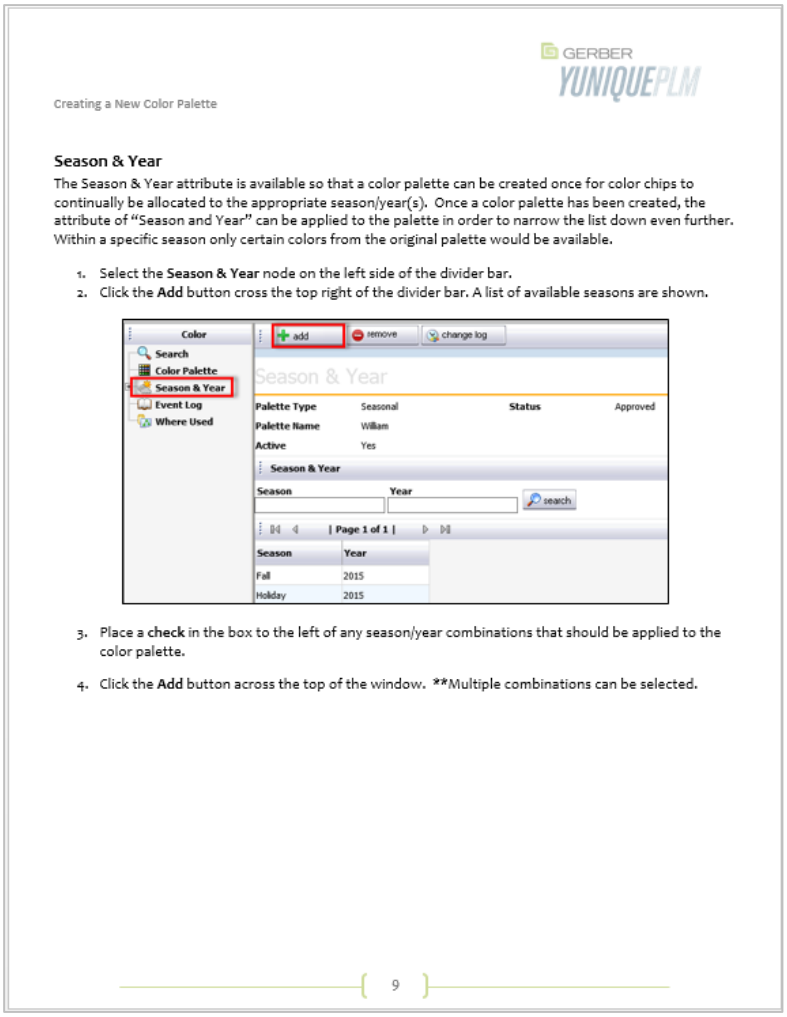
# Body



GERBER YUNIQUEPLM

Creating a New Color Palette

**Season & Year**

The Season & Year attribute is available so that a color palette can be created once for color chips to continually be allocated to the appropriate season/year(s). Once a color palette has been created, the attribute of "Season and Year" can be applied to the palette in order to narrow the list down even further. Within a specific season only certain colors from the original palette would be available.

1. Select the **Season & Year** node on the left side of the divider bar.
2. Click the **Add** button cross the top right of the divider bar. A list of available seasons are shown.

3. Place a **check** in the box to the left of any season/year combinations that should be applied to the color palette.
4. Click the **Add** button across the top of the window. **Multiple combinations can be selected.

9

The **page layout** consists of:

- Header
  - Title and section of manual: Calibri 11 pt.
  - Company logo
- Body (See adjacent box)
- Footer
  - Page # location: bottom center using Brackets 2

Item placement may vary according to design preference.

The **body** font style:

- Capitalize The First Letter = Window Titles/Menus /Products/ Commands (written)
- **Bold** = Commands (software buttons(active))
- *Italics = Notes, Centered captions, de-emphasis phrases/words*
- ***Bold italics = Emphasis***

## Capitalization

**Capitalization in the user interface**

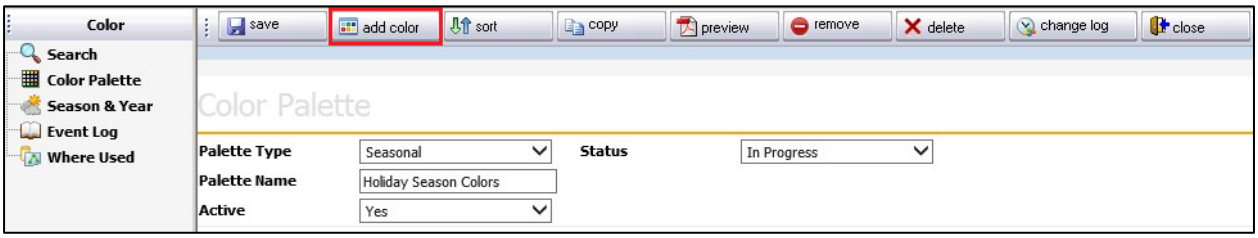
The following basic capitalization rules apply to elements of the user interface:

• Menu names, command and command button names, and dialog box titles and tab names: Follow the user interface. Usually, these items use title capitalization. If the user interface is inconsistent, use title capitalization.

• Functional elements: Use title capitalization for the names of functional elements that do not have a label in the user interface, such as toolbars (the Standard toolbar) and toolbar buttons (the Insert Table button). Do not capitalize the names of user interface elements, such as toolbar, menu, scroll bar, button, and icon.

**Excerpt from Microsoft Manual of Style for Technical Publications, Third Edition**

## Images



**Formatting captured images** (with screen capturing software i.e. SnagIt) All images that require callouts, arrows, text boxes etc. should be formatted within a third-party image editor such as, SnagIt or Photoshop, and then attached to Microsoft Word. The following file types are acceptable;.bmp, .gif, .jpg, .png, or eps. **MadCap Flare will not correctly import grouped images from Microsoft Word.**

- Shapes
  - Use red shapes to callout/highlight desired area using an outline of at **2 ¼ pt. width**.
- Border
  - Use black at **1 pt. width.**
- Crop
  - Cut out unnecessary portions of the image to focus on the main area of the user interface.

## Logos and Color Scheme

**Logos and Color Scheme**

- These are the latest logos as of 7.10.15.
- Use either logo with its matching RGB color values.
- Logo must be surrounded by white space. No images or the like shall reside in the logos background space.

## Messages

Important messages can be conveyed with the following callouts. Be sure to bold important words.

a.

***Tip***

Provides information about the results of a command with no user interaction. Setup completed successfully.

b.

***Warning***

Informs the user about a situation that may require a decision, such as replacing an existing version of a document with a new one. Do you want to save the changes?

c.

***Critical***

Informs the user about a situation that requires intervention or correction before work can continue.

# Importing Word to MadCap Flare

## Word Formatting Recommendations

Microsoft Word documents must be "cleaned" before a smooth import can occur into MadCap Flare. The following recommendations must be adhered to:

- **Images**: Both Word and MadCap Flare support the following image file types. Vector images provide a high quality and are only created using Adobe Illustrator.
  *Review the Images section for further details.*
  - Raster Image formats: BMP, GIF, JPEG/JPG and PNG
  - Vector Image formats: EPS
- **Style Formatting:** Use Styles such as Titles and Headings within Word as stated within the Font – Styles Formatting . Further details are shown on Microsoft's support page, Microsoft Word – Style Formatting

## MadCap Flare – Word Import Recommendations

MadCap Flare also has tips for Word documents and are found via the link below.

- https://www.madcapsoftware.com/blog/guide-importing-microsoft-word-content-madcap-flare/

Here's an excerpt from MadCap Flare's Importing Word guide:

Use Heading Styles

Make sure your Word document uses heading styles (Heading 1, Heading 2, and so on) to organize the content into sections and subsections. During import, you will be able to use the heading styles to choose where to split up the Word document into separate topics.

To apply a style in Word, place your cursor in the text and select a style from Home > Styles, or right-click and select Styles > [word style].

If your source document includes "headings" that are actually normal body text styled to look like headings, consider converting them to real headings and you will reduce the chances of headaches and extra work later on.

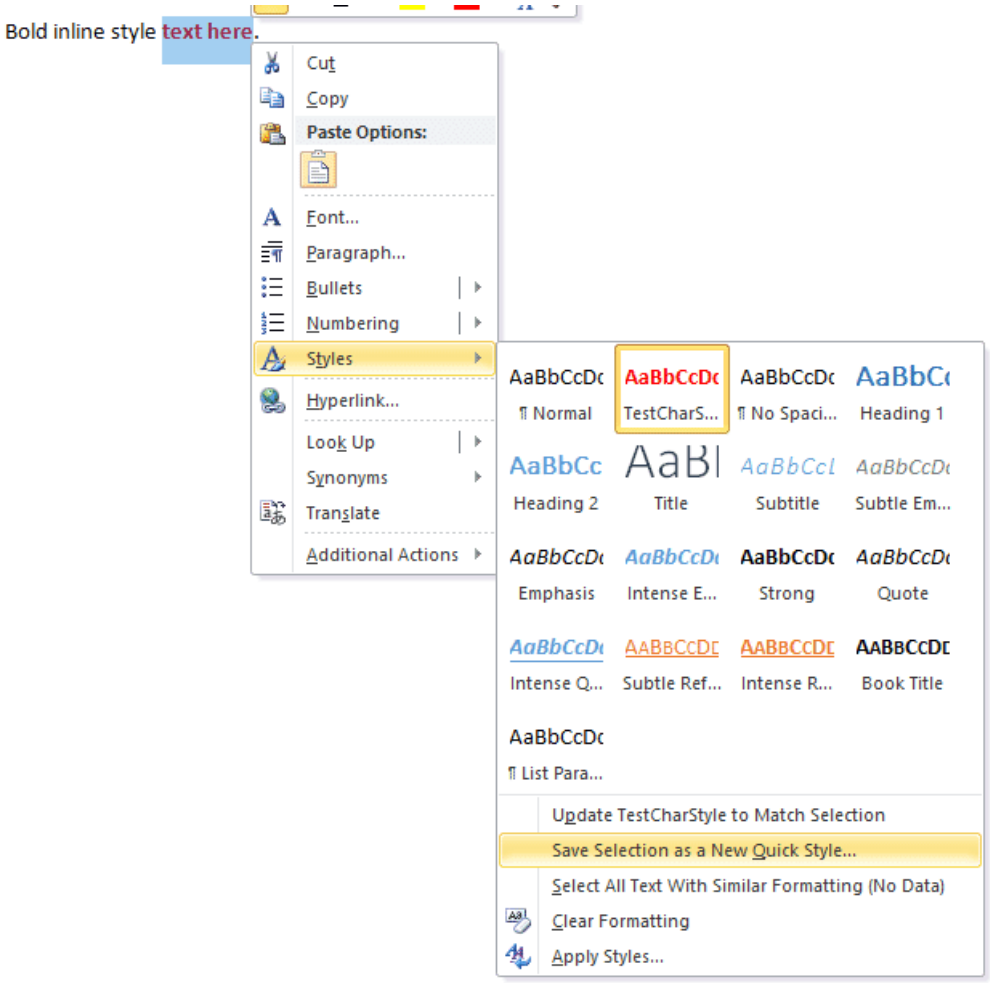
Replace Inline Styles with Word Styles

It is good practice to create styles for any set of visual properties you apply to multiple elements, whether you are working in a Word document or with HTML and CSS. Flare can try to convert inline styles to CSS classes upon import, but it could result in several duplicate rules in your stylesheet.

To prevent this and to allow you to map the Word style to one CSS class, you can convert inline styles to Word styles in the source document. Then you can use Word's Advanced Find & Replace to apply the style to all text that uses those inline styles.

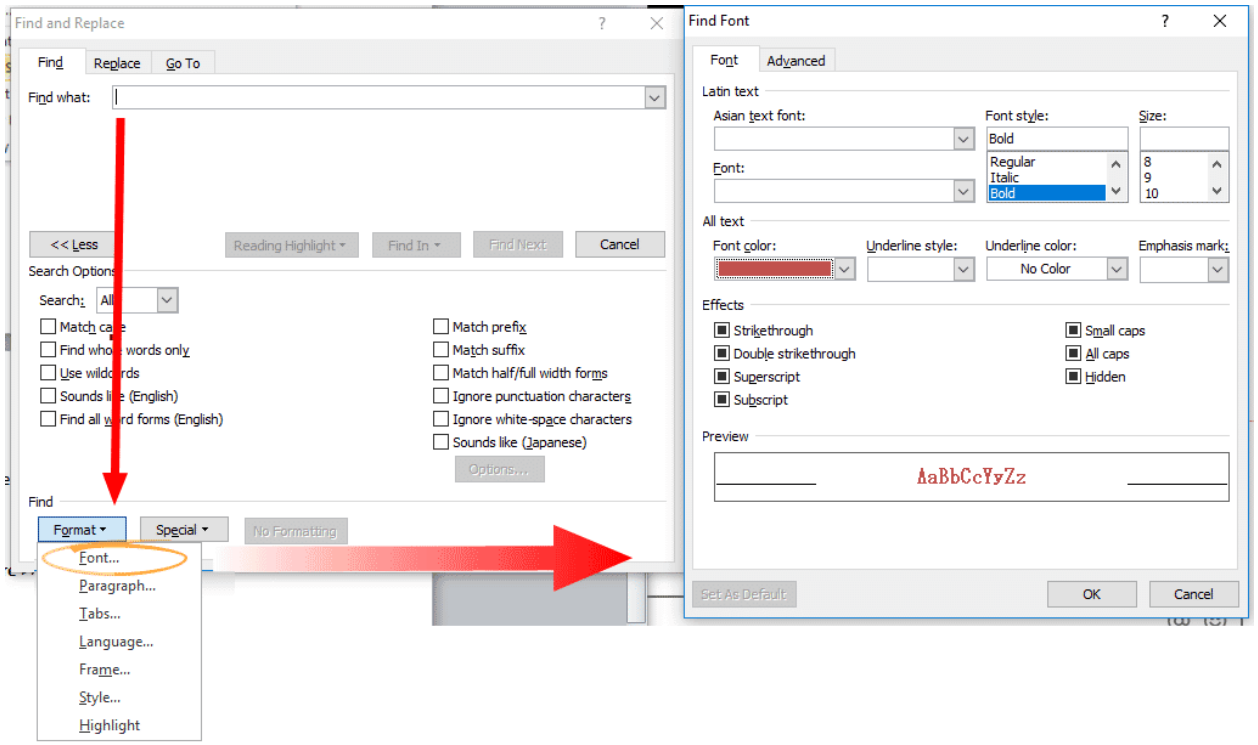
In Word, convert an inline style to a Word style with these steps:

1. Highlight the text.
2. Right-click > select Styles.
3. Select Save Selection as New Quick Style.



When the style is created, apply the style to the rest of the document:

1. Select **Home** > **Find** > **Advanced Find**.
2. Place your *cursor* in the "**Find what**" field.
3. Reveal more options in the dialog by clicking the "**More >>"** button.
4. Select **Format > Font**.



5. Select the relevant font properties in the Find Font dialog and click **OK**.
6. Back in the *Find and Replace* window, open the **Replace** tab.
7. Select **Format > Style** to select the style you would like to apply to the text styled with the properties set below the Find field.
8. Select **Replace** if you would like to verify each replacement individually, or **Replace All**. (Manes, 2018)
